

# ARB™ Merge S400 - Inline

PDF  
Case Study

- **Merges multiple infeeds with optimal product control and throughput using high friction passive 90-degree ARB and static guide rails**
  - High Friction (in direction of travel), maintains product control (minimizes skewing) and position on belt
  - Low “Rolling” friction, transverse to flow allows product to smoothly merge to single file outfeed along static guide rails.
  - Improves reliability and throughput through the merge
